### Heaven's Light is Our Guide

# Rajshahi University of Engineering & Technology

## Department of Electrical & Computer Engineering

# **Lab Report**

Course Title: Digital Signal Processing Sessional

Course No: ECE 4124

**Submitted by:** 

Name: Mohammad Lutfar Rahman Rifat

**Roll:** 1810024

**Date:** 03 - 05 - 2023

**Submitted to:** 

Hafsa Binte Kibria

Lecturer

Dept. of ECE, RUET

Experiment No: 02

**Experiment Name:** Study of convolution of two signals using matlab.

**Experiment Date: 19 - 03 - 23** 

#### Theory:

Convolution is a mathematical operation on two functions (f and g) to produce a third function that expresses how the shape of one is modified by the other. The term convolution refers to both the result function and to the process of computing it. It is defined as the integral of the product of the two functions after one is reversed and shifted. The integral is evaluated for all values of shift, producing the convolution function.

#### Code:

```
xsize = input('size of x = ');
hsize = input('size of h = ');
n = xsize + hsize - 1;
x = input('x = ')
h = input('h = ')
y = zeros(1, n);
for i = 1:xsize
    j = 1; k = i;
    while j \leq xsize && k > 0
        y(i) = y(i) + (x(j) * h(k));
        j = j + 1; k = k - 1;
    end
end
for i = 1: hsize - 1
    j = i + 1; k = hsize;
    while j \le xsize \&\& k > 0
        y(i + xsize) = y(i + xsize) + (x(j) * h(k));
        j = j + 1; k = k - 1;
    end
end
У
subplot(2, 2, 1); stem(x, 'marker', 'o');
title('X(n)');
subplot(2, 2, 3); stem(h, 'marker', 'o');
title('H(n)');
subplot(2, 2, 2); stem(conv(x, h), 'marker', 'o');
title('Convulation Function');
subplot(2, 2, 4); stem(y, 'marker', 'o');
title('Convulation Y(n)');
```

### **Output:**

```
size of x = > 4
size of h = > 4
x = [1 2 3 4]
h = > [4 4 3 2]
     4
          12
                 23
                       36
                              29
                                     18
                                             8
                       X(n)

                                                                4
                                                                          6
```

Fig. 1: Output of convolution of two signals.

### **Discussion:**

In this experiment, we have studied the convolution of two signals using matlab. We have taken two signals x and h and convolved them to get the output signal y. We have also plotted the graph of the signals x, h, y and the convolution function. The output of the program is shown in Fig. 1.
